परीक्षक द्वारा

प्रश्न

परीक्षार्थी उत्तर

We know that Aggregate demand is equal to summation of Consumption and Investment.

$$\text{Aggregate demand (AD)} = C + I \text{ --- (i)}$$

At equilibrium level, AD is equal to Income (Y).

$$AD = Y \text{ --- (ii)}$$

$$AD = C + I$$

$$AD = 40 + 0.75Y + 10$$

$$Y = 40 + 0.75Y + 10$$

$$\because AD = Y$$

$$Y - 0.75Y = 40 + 10$$

$$0.25Y = 50$$

$$Y = \frac{50}{0.25}$$

$$= 200$$

$$Y = \frac{5000}{25} = 200 \text{ crore}$$

So, Aggregate demand is 200 crore

Stability function of government budget

- Government tries to bring stability in the economy through its budget.
- Government protects economy from business cycle.

Government protect economy from business cycle of boom, recession, depression, recovery etc.

Method to bring stability

- During the time of high unemployment and deflation, government tries to raise the demand and employment level by subsidy and money supply etc.
- Similarly, during inflation, government tries to bring down the demand by taxes and control of credit.

→ So, intervention of government either to expand demand or to reduce it is called stabilisation function.
